SPEED

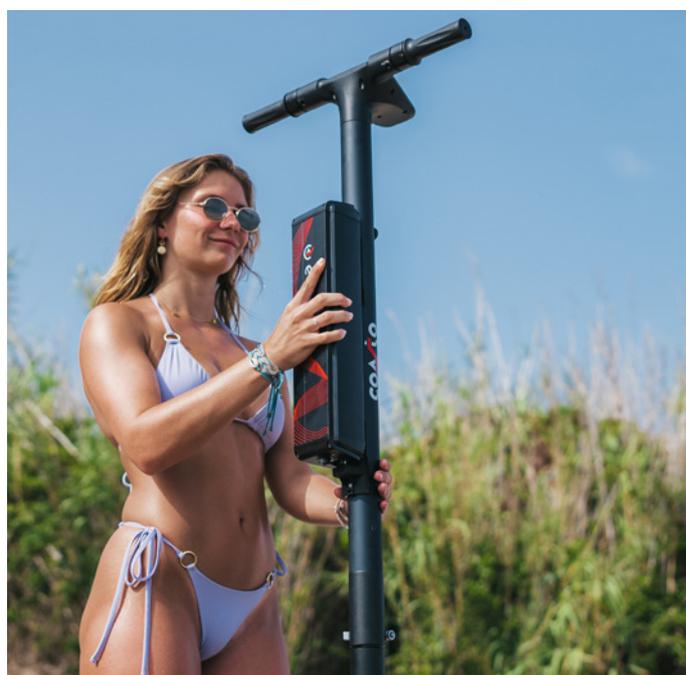

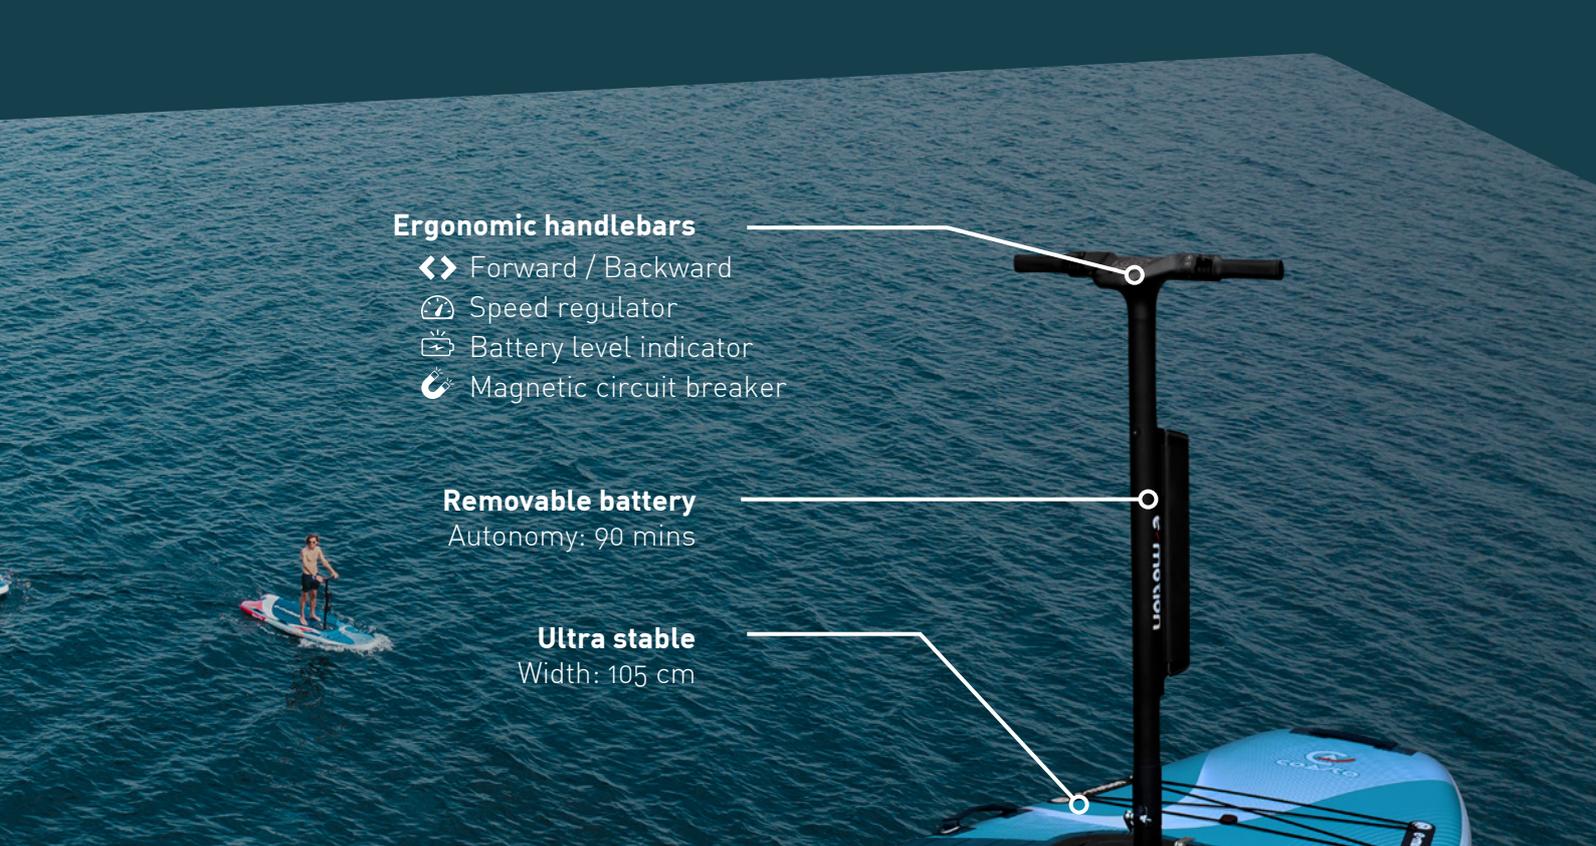

EASY TO TRANSPORT

Probably one of the greatest advantage of this product: transportation! Once deflated, the board folds fully to fit in a transport bag on wheels measuring 110x50x30cm, for a mere weight of 16kg. The motor disassembles in less than 5 minutes and is easily stored in its own transport case (105x37x30cm) weighing less than 11kg! The Coasto E-Motion SUP has been conceived to adapt to any car trunk and be conveniently transported up to the water point.

EASY TO INSTALL

The E-Motion wants to be simple and reassuring. The board's width is 25% wider than classic stand up paddles. This width brings maximum and securing stability. You will be at ease and confident from the first use if it is your first outing. Control your speed forward and backward as you wish with the throttle. As for the handlebars, its directional angle capacity will enable to perfectly control your direction during navigation.

Ergonomic handlebars

- ◀▶ Forward / Backward
- ⌚ Speed regulator
- 🔋 Battery level indicator
- 🔌 Magnetic circuit breaker

Removable battery

Autonomy: 90 mins

Ultra stable

Width: 105 cm

Structure in X
Inflated at 15 psi

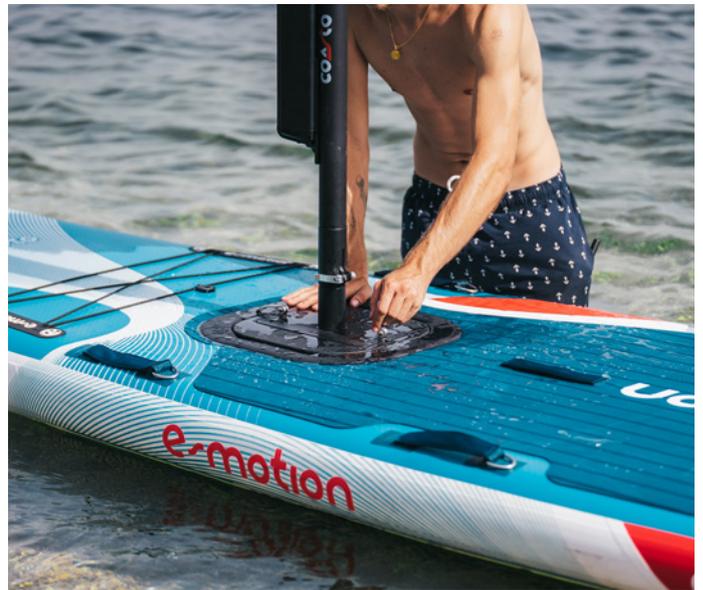

Engine with Forward/Backward propulsion system
Up to 6km/h

SAFETY & COMFORT

To guarantee maximum safety, we have equipped the Coasto E-Motion SUP with a magnetic circuit breaker leash. Connected to the handlebars and attached to your wrist, it will allow you to instantly cut the engine in the event of a fall. About the battery level, we have equipped the handlebars with an indicator light (4 leds) and a sound signal that warns you when battery level is low. Should the battery run low during your ride, you can reach shore with the paddle attached to the handles.

RIDE ON, EXPLORE IT, DARE MORE.
